# MV MVv Curtain wall

## Beaded / Bonded structural glazing

Same structure for

façades with bonded or

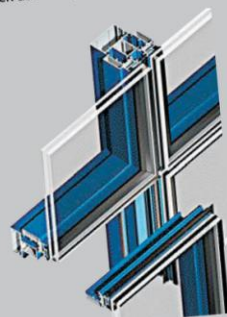

beaded structural

glazing.

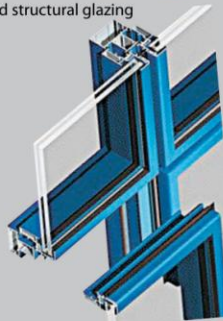

Architects: A.B. Toussier - E.X. Benony

## "fixed frame = opening frame" façade system

- Infill : 6 to 31 mm for glazing, and 31 to 41 mm for panels.
- Top-hung concealed opening frame, 100 kg/leaf.
- Bonded structural glazing façade principle under CSTB Technical Advice (agreed control organization), bonding under inspection of an agreed control organization.
- Modules-based system. Modules are prefabricated at the workshop, for a reduced working time on site : simple and quick assembly.

Bonded structural glazing

Glazing, gaskets and beads are clipped

## Same structure, bonded / beaded glazing

- Aluminium structure with added fixed or opening frames.
- Tubular mullions and transoms - 71 mm module.
- Making of façades curved by 20° (convex angle).

## Bonded structural glazing - technology and look

- Uniform, smooth façades, apparent mirror effect.
- 20 mm hollow gaskets between each façade module.
- Fixed and opening frames available with or without edging (free edget).
- Glass panel bonding performed by specialised company, CEBTP-accredited (authorized control organization) in accordance with Technal guidelines.

## Beaded structural glazing - structure and harmony

- Identical appearance for fixed, opening frames and bottom fixed lights.
- 16 mm hollow gaskets between the aluminium modules.
- Vertical or horizontal grid effect according to frame dimensions, enhanced by outer glazing beads.
